

noyau contenant l'ADN

①

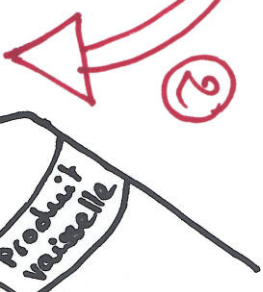

cellules s'écrasées

banane écrasée

②

verser le broyat

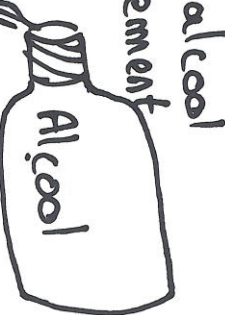

coton

③

bouts de cellules cassées et ADN libre: il n'est plus dans les noyaux

verser l'alcool délicatement

ADN précipité (on dirait une mèche)

⑤

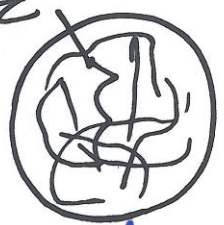

les filaments d'ADN se condensent et précipitent: on les voit à l'œil nu.

④

longs filaments d'ADN

plûte à champagne
